

Using the Matchup Game Card

The game card is a precomputed at-table card for one specific matchup.

During play

Possession step	Where to look on game card
Pick action player	Use column in the offense table.
Resolve turnover/foul/shot	Same row: TOV, Foul, Shot ranges.
Choose 2PA or 3PA	Same row: 3PA? range.
Resolve make/miss	Same row: 2P make, 3P make, or FT make.
Assist check	Static team calcs: Assist on made 2/made 3.
Rebound check	Static team calcs: ORB on missed shot. If not OREB, assign DREB.
Assign stats	Assignment matrix: AST, OREB, DREB, STL, BLK, PF columns.

Important shorthand

A range like **01-27** means the event happens on d100 rolls from 1 through 27. A dash means the event cannot happen from that table.

Why this matters

The original rules showed formulas so the math was transparent. The game card applies those formulas before the game, which keeps the tabletop flow closer to roll/look up/record.
